

Developing an Eye for Accuracy

Improves the quality and reputation of your operations,
delivers cost-saving gains and increases productivity.
Getting it right first time, every time.

Working for the pharmaceutical sector

Data accuracy is essential in the highly regulated pharmaceutical sector. Accurate batch processing, manufacturing data and product distribution are vital to patient safety. Mistakes which take only a few seconds to make have big repercussions.

The average error rate for our pharmaceutical clients is 2.1%.

Meaning 2.1 in every 100 pieces of data your people process contains a mistake.

Our research suggests once a mistake is made it takes twice as long to track down and twice as long again to fix.

Results show that people working in pharmaceuticals typically spend 12.5% of their time making, finding and fixing mistakes.

**That's 12.5% of your
company's salary bill**

It's like
employing your
own error
department!

ERRORS

Results show a 52%
reduction in errors!

**That's £1,417 saved
per person
per year**

Measurable results prove return on investment

All participants take a test assessment at the beginning and the end of the training. This tracks their improvement in accuracy and processing speed.

Results show the training measurably reduces data error within the pharmaceutical sector by 52%.

The return on investment is calculated through the value of the time saved through making fewer errors. The typical saving within the pharmaceutical sector is £1,417 per person per year.

Think about **GREATER PRODUCTIVITY** - more achieved in the time saved through improved accuracy and greater efficiency

Think about the **MONEY SAVED** - fewer fines, compensation payments and lost business opportunities

Think about **NEW SKILLS** - developing core abilities such as accurate data transfer, concentration, attention to detail, checking and consistency

Think about **WELLBEING** - fewer complaints and less re-work mean less stress, less hassle and a happier workforce
